

High School Biology Activity

Topic: Human Digestive System

Objective

Students explore and understand concepts related to human digestive system.

Materials

- Biology textbook
- Notebook
- Chart paper
- Markers
- Internet access

Procedure

1. Introduce the concept of human digestive system.
2. Discuss structure and functions.
3. Use diagrams or models for explanation.
4. Students draw and label diagrams.
5. Present and explain findings.

Observation / Notes

Observation	Notes

Discussion Questions

- Why is human digestive system important?
- What are its main functions?
- How does it affect living organisms?
- What careers relate to this topic?

Extension Activity

Create a labeled diagram or model showing human digestive system and present it.
